The program provides the ability to rename the file, password fields, and data fields.The effects of the surface-bound lipids of phospholipase A2 on the reaction with lysophosphatidylcholine. The effects of the surface-bound lipids of phospholipase A2 on the reaction of the enzyme with lysophosphatidylcholine (LPC) were examined. Binding of LPC to the surface-bound lipids of phospholipase A2 was achieved by adsorption onto the surface of the liposomes with the lipids in the bilayer. The formation of the lipid-enzyme conjugate was confirmed by an electrophoretic assay. The kinetics of the reaction of phospholipase A2 with LPC, and the effects of the bound lipids on the reaction, were studied using a newly developed rapid-reaction-monitoring technique. The binding of LPC to phospholipase A2, to its reactive enzyme-substrate intermediates, and to the active site of the enzyme, was examined. Phospholipase A2 was shown to bind LPC at the surface-bound lipids and to interact with the LPC as a Michaelis complex. The kinetic parameters (Km, Vmax) of the reaction 2edc1e01e8
