The release of Photoshop for iOS will have an app-specific roll out for the first half of 2019, but for now, that means Photoshop won't be available for photo editing on the iPhone. While the new features might be great, it would be hard to deny the fact that the app on iOS is a bit outdated and require more work to bring it up to the standards of the more powerful Photoshop features. Software releases for the Pixelbook and iPad Pro are also coming. Since its launch on Photoshop 2019, Photoshop Elements has moved the powerful way of working to the cloud. With an intuitive and straightforward new design, Photoshop Elements makes it easy to join a working group and get started editing right away. There's no need to download files, navigate through a messy toolbox, or write a checklist of steps. And thanks to new collaboration features across Windows, macOS, iOS, and Android, people can edit, share, and collaborate on projects and tag images without leaving Photoshop, or even leaving the room. When using Elements with a computer, the Creative Cloud desktop app no longer needs to be opened. Elements continues to use the same file formats supported by Adobe's existing desktop application, including the leading TIFF file format, and supports all the file types natively in Photoshop CS6, as well as in the new Photoshop 2020. For now, you can download a free trial of Photoshop for Mac, Windows, iOS, and Android devices, however a full feature-rich trial for 10 days will soon be available to all users. However, that trial will be a bit short on features, so you might want to stick to the paid subscription for now.
