In order to create a single, solid, image with no background, select the background layer and then disable the visibility of this layer in its Layer menu. To view the background again, simply enable the layer and check it in the Layer Menu. Once you've done this, you can duplicate the layer into several layers. This way, you can make sure each image is a perfect size that will fit your design properly. You can then adjust the size and position of each layer. However, to be able to do this, you have to enable the visibility in the Layer Menu. To make sure the layer is part of your file, make sure to check it in the Layer Menu that is displayed in the top toolbox area of Photoshop (on the right side). Now, you can do as many things to the image as you need. You can adjust the brightness and contrast, add special effects, use adjustment layers, layer styles, and layer masks. In order to use selection layers, you have to select them and place a checkmark beside their names to allow you to see them and adjust them in the Layers Panel. To do this, you have to first enable the visibility in the Layer menu to be able to view them.
